fish net coating

913 Quik Coat is a cost-effective, resin-based product, formulated especially for use on shrimp nets and fish nets. It will penetrate deep into webbing to eliminate white knots and protect the net from wear and rotting. The durable plastic coating prevents absorption of seawater thus reducing drag and fuel consumption. 913 is a fast-curing, 200-viscosity product that is green in color to meet the requirements of the majority of fisherman.
